

ProviderGateway Inc. Health & Human Services Technology Solution To Budget Problems

PROBLEM

ProviderGateway™ Inc. specializes in web-based solutions for managing and tracking Public Health and Human Services throughout public and private provider networks. The ProviderGateway™ applications are designed for maximum coordination, control and integration of the tracking of client services, costs and funding streams in public Health & Human Service programs.

Almost all the States are suffering revenue shortfalls, costly inefficient duplicative systems, inflated operating costs, and inefficient resource utilization. Over 70% of expenditure in the public HHS arena is used to purchase services from private provider network. Attempts to cut cost through automation should be focused on such large portion of the spending. Also, most of the HHS programs are federally subsidized, and maximizing such subsidy requires detailed tracking and accountability. The applications are built on Microsoft .NET technology and offer maximum scalability and flexible configuration

SOLUTION

ProviderGateway™ offers value across variety of HHS programs. It has been implemented for Mental Retardation & Developmental Disabilities, Welfare-to-Work, Child Care, Workforce Development, and Long-Term-Care Subsidy Management delivery systems. The ProviderGateway solutions offer the states significant cost savings and the opportunity to maximize revenue from various federal programs.

The solution offers mid-management and front line workers in government, as well as the proider networks, the connectivity tool to conduct all their daily service transactions, while providing the states' HHS authorities with the business intelegence to maximize revenue, reduce transaction cost, and meet federal requirements for reporting and audits.

The application covers the processing, tracking, and documentation aspects of all service delivery system processes including intake, eligibility, service planning, service referrals, service authorization, provider contract management, charges, billings, and reports. It is also, easy to integrate with other legacy systems to preserve the states investment in such systems.

ProviderGateway™ uses Microsoft Windows 2003 Enterprise Server™ and Microsoft SQL 2000. Its standard system architecture includes flexibility in defining user profiles and security classes. The system manages the permission requirements for locations and persons within locations.

ProviderGateway™ reduces the cost of transactions by over 35% and eliminate the cost of preparing all needed reports to satisfy all state and federal reporting requirements including billings and reimbursement claims. It is off-the-shelf solution that is ready to be configured and deployed in a few weeks.
